Lead and tin are obtained from a mine located on an 800 meter plateau, six kilometers northwest of Rusca Montana in the direction of Nadrag. The ore crushing installations, which supply the Brad Works, were enlarged in 1951. Production is 20 to 30 tons of lead and tin ore per day, which is transported as a semi-finished product. About 400 workers are employed. The equipment consists of ball mills, with steel balls of 120, 140, and 160 mm. diameters for crushing the ore. The mills have a capacity of 1,500 to 2,000 kilograms per hour. The ore is of poor quality, containing only 16 to 18 percent of lead.
